

# MaGBox Product Range

## Power Enclosures

## Power Enclosures

MGB Signalling Ltd supply a range of **MaGBox** Power Enclosures that provide equipment power supplies and efficiently manage incoming cables within Railway Signalling enclosures.

The **MaGBox** Power Enclosure range is used extensively across the railway infrastructure and is currently operational on several key projects within signalling Location Cases and REBs.

The standard range is available in stainless steel using rail industry proven components and includes a removable gland plate that can be pre-drilled to suit any cable installation requirement. Bespoke design configurations and materials are offered to suit any desired application. MGB offer the added option of a Spreader Box used to increase the inward housing space used to spread and terminate larger cable cores.

Each **MaGBox** Power Enclosure comes fully tested to 3A and 3BL standard making the equipment effectively ready to 'plug and go'.
